# Family Doctor

#### **DOES**

- Regularly review and analyze patient profiles and medical histories.
- Organize examinations, therapies, and appointments to guarantee a smooth experience for the patient.
- Facilitate communication among healthcare professionals in patient care.
- Follow prescribed medication and treatment plans.

## INSIGHTS AND CONCULSIONS

Understanding the feelings and needs of both patients and healthcare providers in the medical field helps us come up with practical plans. By using these insights, we can make the healthcare system more focused on patients, supportive emotionally, and better at handling different health issues. The main aim is to make healthcare better for everyone dealing with diseases and those providing care.
